21 Jul 2014 . Chinchillas are rodents that are native to the Andes Mountains of northern Chile. Often kept as pets, chinchillas are also prized for their luxuriously soft fur and were nearly driven to extinction because of the demand. Chinchilla fur was originally mottled yellow-gray in the wild, according to The Merck.

Chinchillas are very cuddly-looking and cute with their soft, lush fur for which they are well-known. These exotic pets only have two living species to their name: the Chinchilla chinchilla (or Chinchilla brevicaudata) and Chinchilla lanigera. The only difference between them is that the C. chinchilla has a short tail, broader.

Chinchillas are a fairly large species of rodent originating from South America. They are active, social nocturnal animals and make brilliant pets if they are cared for correctly. Two chinchillas are better than one. In the wild chinchillas live in large, social groups called herds. At Raystede we never rehome a single chinchilla.

Chinchillas are social pets that require some special care and feeding.

Chinchilla fur is so velvety that the best thing about your new pet will simply be holding it. A chinchilla's luxurious coat comes in a range of colors, from white to charcoal. Unlike most furry mammals that have one hair fiber per follicle, a chinchilla can sprout up to 80 hairs from just one follicle. This South American native is.

Do you wonder why your chinchillas behave in certain ways? Read our top tips to help with chinchilla behaviour.

The Chinchillas silver-lead-zinc project is located within the Bolivian silver-zinc-tin belt, which stretches into northern Argentina. It is one of biggest silver discoveries in 2014 and is estimated to contain indicated resources of 104 million silver-equivalent ounces. Golden Arrow holds and operates the silver-lead-zinc project.

Chinchillas have an inquisitive and gentle nature, but also have a lot of energy.
